HYDRAWAV3

× GLOBEHACK SEASON 1

Team: RecoveryIQ

Situations

Hydrawav3 face 3 main issues:

1. Before the session: don't clearly know **where the problem is**
2. During the session: don't have help to choose the **best setup**
3. After the session: **no system to track results** from patients

Challenges in 90 minutes:

Quickly understand new customer's body
What's going on? Where is the issue?

Give the right treatment
Not guessing, but personalized

Continue recovery after the visit

Summary Solutions

Demo Session

1 Before the session:

- using Camera to detect movement/asymmetry (reduce steps 2-3)
- SVG Intake
- Faster detection pain

2 During the session:

- 3D Model (shows exact pad placement visually)
- Initial Protocol Suggestion (simple protocol with reason and practitioner reviews)

3 After the session:
Using webapp to show dashboard (recovery score, track progress)

Summary Solutions

What business benefits does this upgrade deliver? (by product)

1. Before the session: using Camera to detect movement/asymmetry + SVG Intake

2. During the session:
3D Model (shows exact pad placement visually) + Protocol Suggestion

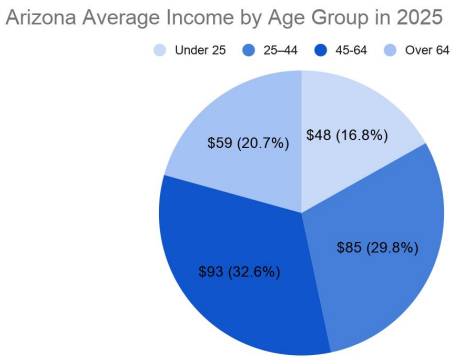
- **Faster intake** (reducing time per patient)
- **Faster, more confident decisions**, especially for less experienced practitioners, with clear guidance on where to place Sun and Moon pads
- **More accurate results from the first session** (helping build client trust)

3. After the session:
Using webapp to show dashboard (recovery score, track progress)

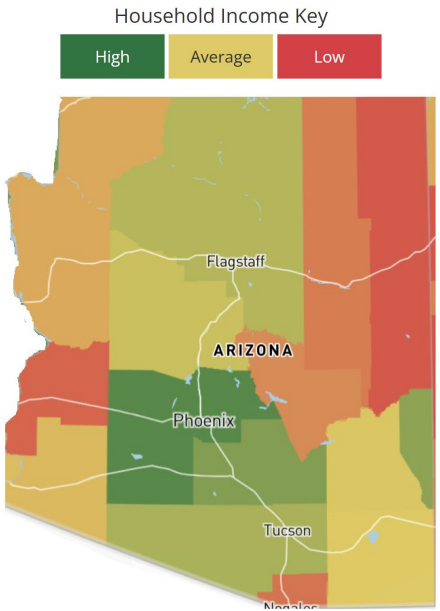
- Clients **clearly understand** their recovery status
- **Builds trust and strengthens the client experience**, making it easier to retain clients
- Increases **repeat visits** and drives **word-of-mouth referrals**

Summary Solutions

Go-to-Market Strategy



Median Arizona age 39 years in 2020



Reference:
[Average Salary by Age – Forbes Advisor]
[Arizona - Census Bureau Profile]
[The Highest and Lowest Income Areas in Phoenix, AZ | BestNeighborhood.org]

Strategy

1. Know your target: target the right clinics
   a. Focus on clinics serving **middle–high income households**
   b. Prioritize patients aged **45–64**
      - Higher purchasing power
      - stronger focus on recovery and wellness
2. Awareness & acquisition
   a. Use **Facebook** to reach patient, pratictioner, and clinic
      - Content focus: short demo videos, before/after results, patient success stories
3. Demonstration-led selling
   a. How the system works
   b. Prove results
4. Show comparison revenue-driven value proposition between with and without Hydrawave3 (how significant increase revenue)
5. After-sales service

Summary Solutions

Go-to-Market Strategy

1. **Hands-on trial for practitioners**
   a. Full-feature access (beginner to professional)
   b. Learn by doing, not just demo
2. **Track feedback weekly**
   a. Practitioner + patient outcomes
   b. Show real improvement during trial
3. **Data-driven conversion**
   a. Present results + revenue potential
   b. Build confidence with proof
4. **Sell tiered packages**
   a. Starter (basic use) - limited data storage
   b. Pro (AI + tracking + insights) - unlimited data storage
5. **After-sales service**

Future Work

1. Smarter personalization & symptom understanding

Enhance the system to better **identify patient discomfort patterns**

Train models using:

- Hydrawav3 session data - NLP
- Patient feedback (pain location, intensity, progress)
- Practitioner input and labeling (report)

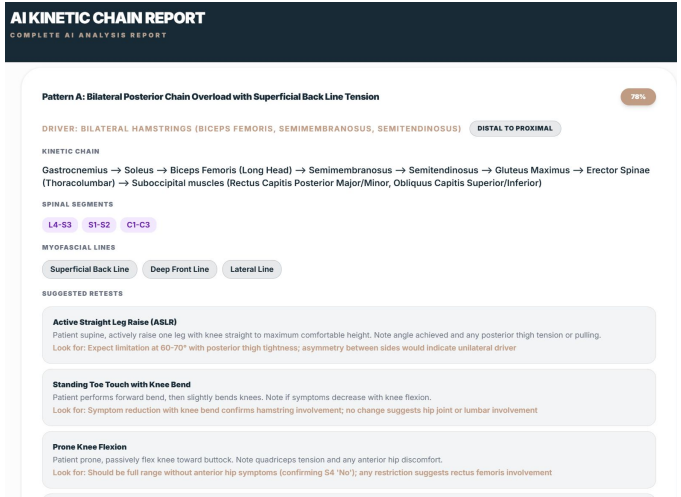
Apply the trained model from the **before the session**:

- To reduce guesswork further and make recommendations more accurate over time

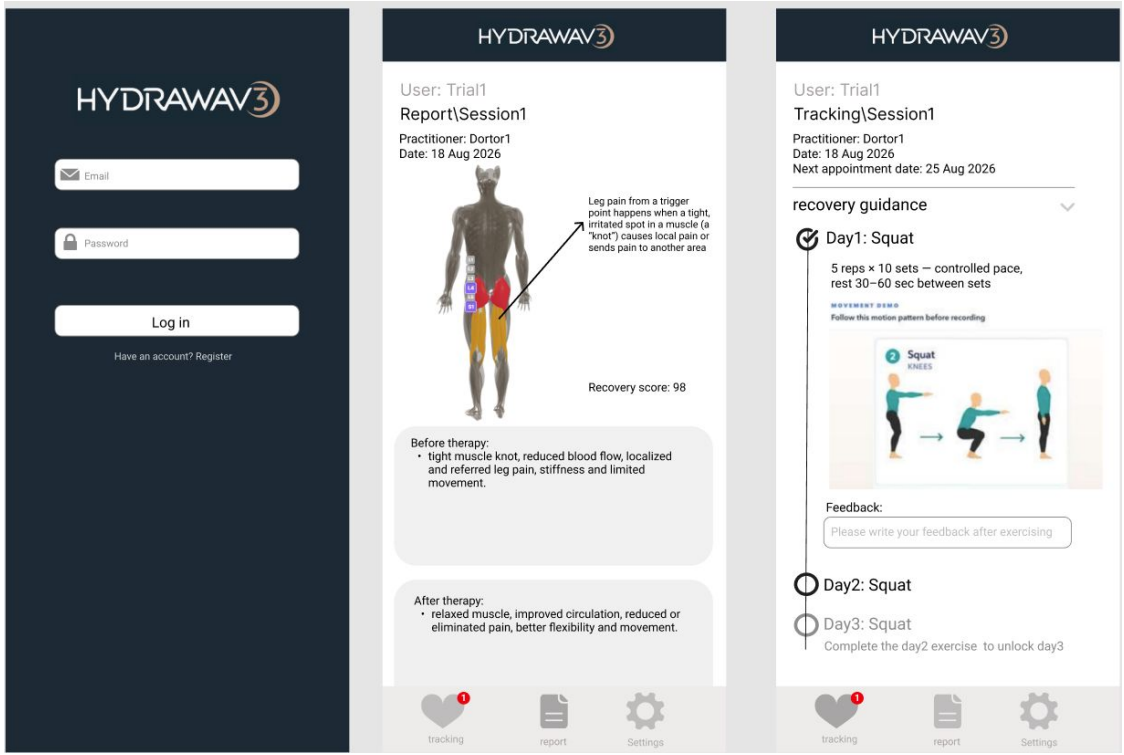
2. Data-driven learning system

By analyzing customer data across age groups, the system identifies common pain patterns (map patterns to common tension / trigger zones) to find root issue and uses these insights to continuously improve how it supports those discomfort areas.

Builds stronger practitioner trust



Future Work



3. Web application (cost-efficient scaling)

Start with a lightweight web app to reduce cost and enable fast deployment, while keeping patients engaged through dashboards, 2D/3D pain visualization, summary reports, feedback, and recovery progress tracking.

Thank you
